

Therapy-Related Leukaemia

What is it? Who has it? Are you sure?

Evolutionary drive to think you are right

Apophenia

The human tendency to perceive meaningful patterns within random data

My 3 problems...

Apophenia

Conjunction fallacy

Evolutionary drive to think you are right

Are you intelligent OR rational?

65 year old man with newly-diagnosed AML worked in a nuclear power facility for 30 years. His weekend hobby is making model airplanes using petroleum-based glues in a closed workspace. A survey of his basement shows high radon level. The **mostly likely** cause of his AML is...

Questions

What is *secondary or therapy-related* leukaemia?

Who has it?

Can we diagnose it accurately?

Questions

What is *secondary or therapy-related* leukaemia?

Who has it?

Can we diagnose it accurately?

Secondary or Therapy-Related Leukaemia

A leukaemia *known to be* caused by or contributed to by exposure to DNA-damaging (mutagenic) agents such as ionizing radiations, drugs or chemicals

Typical Variables

Older age

Antecedent haematologic disorder/MDS

Anaemia, Decreased WBC, platelets

Dysplastic bone marrow

Cytogenetic abnormalities del(5/5q), del(7/-7q), del(3p), del(17p), t(18;21), t(3;21), t(8;21), t(x;11q23)

Mutations *EVI1*, *AML1/2*, *MLL*, *NRAS*, *FANC*, *XPD*,
NQ01

But....

None of these features is unique to
secondary or therapy-related leukaemia

Some Exposures Implicated in Therapy-Related Leukaemia

Ionizing radiations

DNA-alkylating drugs

Topoisomerase-2-inhibitors

Benzene

Radon

Smoking

Formaldehyde

Anti-Cancer Drugs Linked to Leukaemia

Alkeran

Busulfan

Cyclophosphamide

Chlorambucil

Cisplatin

Doxorubicin

Etoposide

Melphalan

Mitoxantrone

Nitrogen mustard

Nitrosoureas

Thiotepa

Caveats

Not all anti-cancer drugs cause *therapy-related* leukaemia

Not all exposures to relevant drugs cause *therapy-related* leukaemia

If you see someone with leukaemia
exposed to one of these *agents* does *they*
have therapy-related leukaemia?

Problems with these analyses

They reflect associations, not *cause-and-effect*

The calculations assume you know who has *secondary or therapy-related* leukaemia

Associations refer to cohorts not individuals

Questions

What is *secondary or therapy-related* leukaemia?

Who has it?

Can we diagnose it accurately?

Why are statistics important?

*To understand God's thoughts we must
study statistics for these are the measure of
his purpose*

Florence Nightingale

The science of medicine is uncertainty.

The art of medicine is probability.

Sir William Osler.

The science of medicine is uncertainty.

The art of medicine is probability.

Sir William Osler.

How do epidemiologists view causation?

Probability of Causation

$$\text{Probability of Causation (Assigned Share)} = \frac{\text{Excess Relative Risk}}{\text{Relative Risk}} \times 100\%$$

Variables Needed to Calculate Probability of Causation

Agent

Dose

Schedule

Age at exposure

Gender

Interval from exposure to leukaemia

Potential confounders (prior cancer, genetic disorder, smoking *etc.*)

Variables Needed to Calculate PC

Agent

Dose

Schedule

Age at exposure

Gender

Interval from exposure to leukaemia

Potential confounders (prior cancer,
genetic disorder, smoking *etc.*)

A-Bombs and Leukaemia

Variables Needed to Calculate PC

Agent

[+](#) Add

[Assumptions, Settings and Report Options](#) **▶▶**

[Generate Results](#) | [Clear](#)

Probability of Causation

45% (95% CI, 25, 65%)

Limitations

In clinical setting we rarely have data needed to calculate a PC

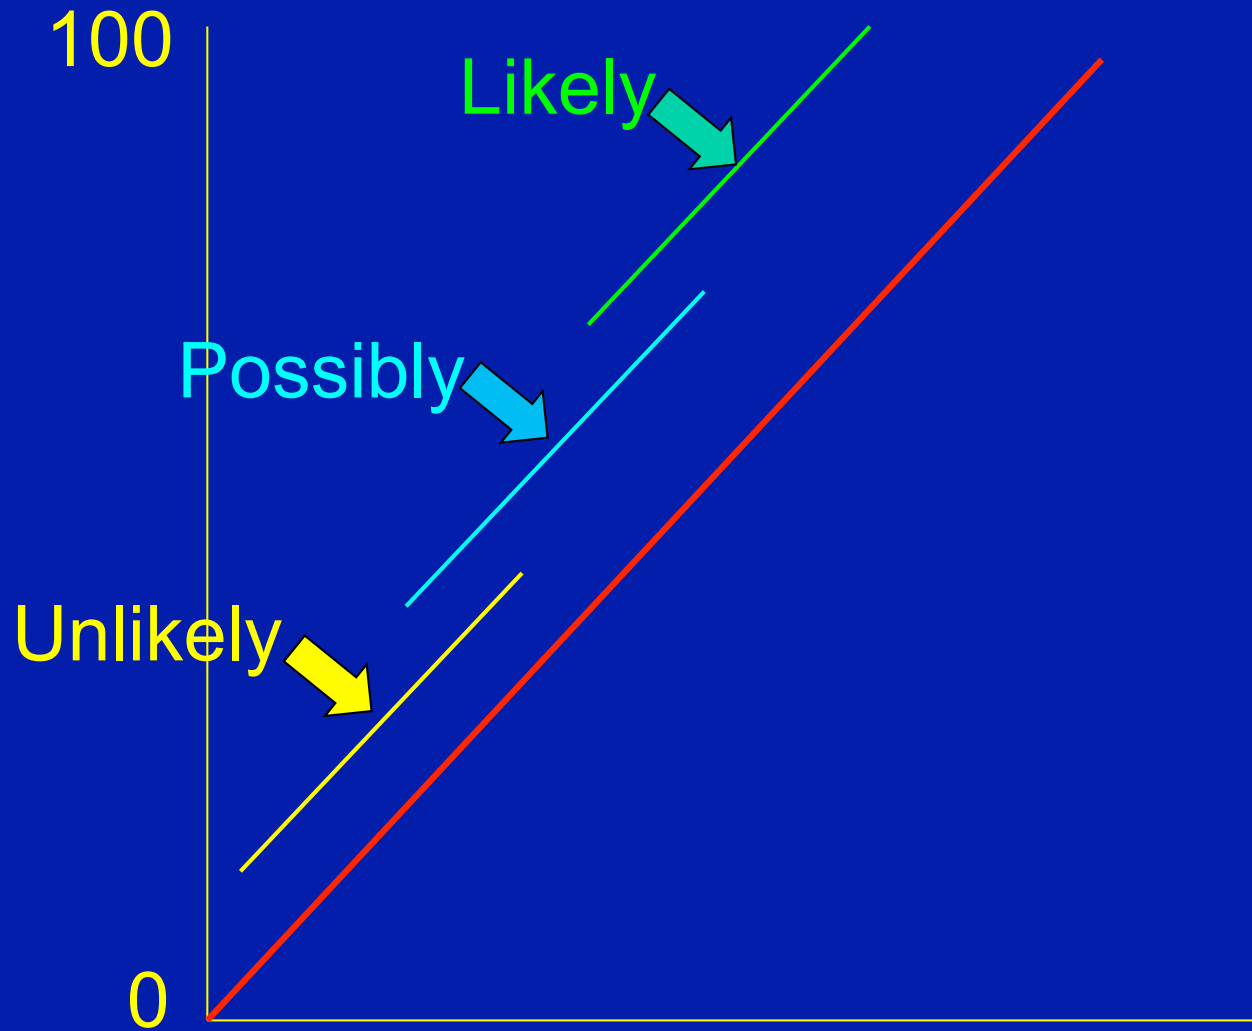

We lack statistical programs to calculate PC for exposures other than radiation

PC Calculation

Consequently, it is best to use estimates such as *likely*, *possible*, *unlikely* which encompass uncertainty rather than a binary (Y/N) with no expression of uncertainty

PC Calculation

Why is any of this important?

Why is uncertainty important

Mis-labeling someone as having *therapy-related leukaemia* can result in a fatal physician error

No therapy because the situation is hopeless or a transplant because nothing else will work

Questions

What is *secondary or therapy-related* leukaemia?

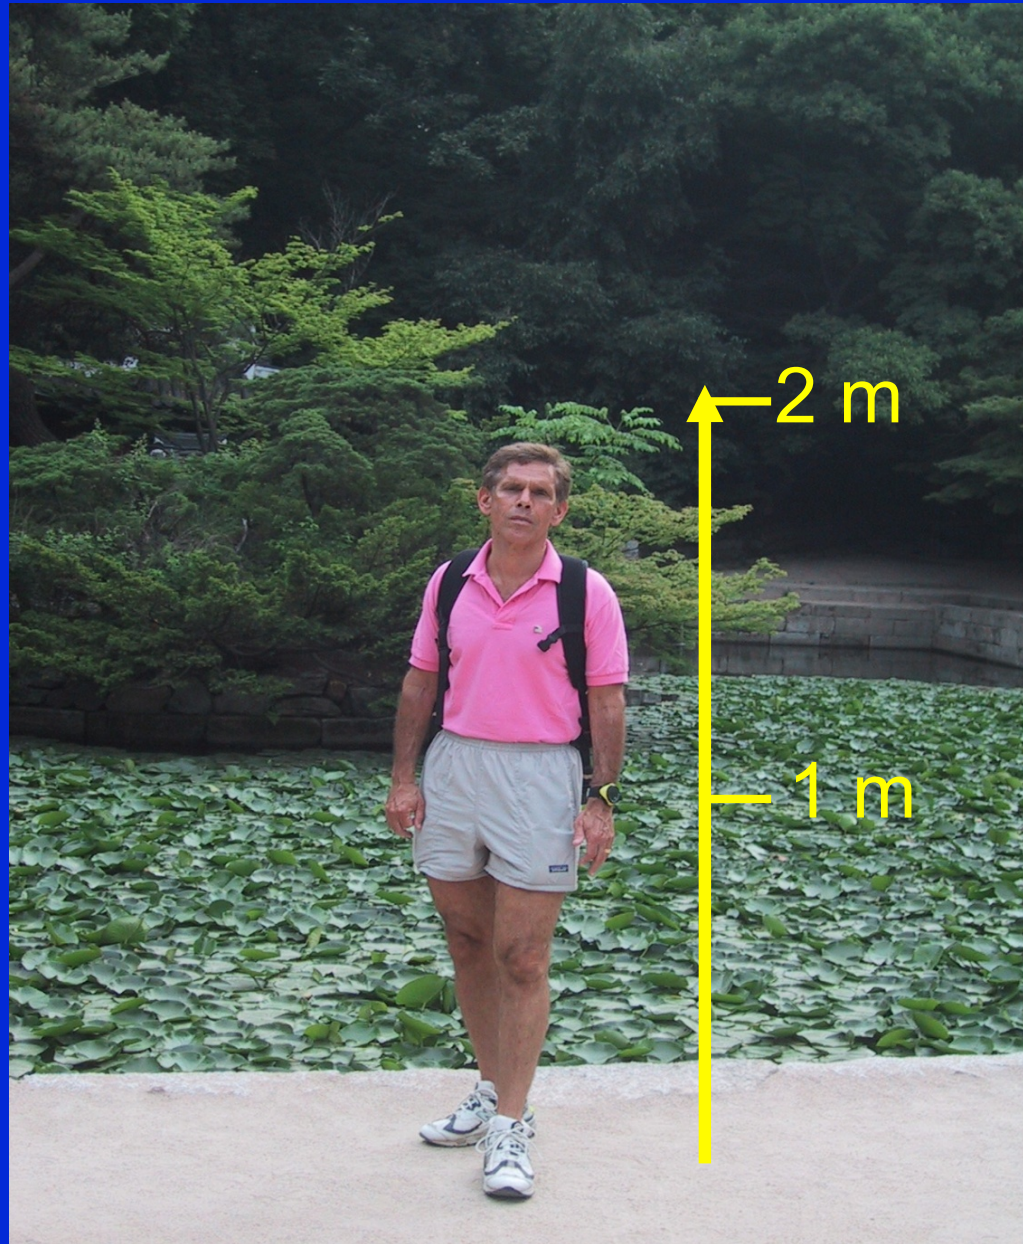

Who has it?

Can we diagnose it accurately?

What is the difference between an estimate and a guess?

How tall is Bob Gale?

Estimate

Is Bob Gale's wife beautiful?

Guess

Compared to what?

How can I know, I've never seen her?

Aging is not a battle, it's a massacre.

Phillip Roth

Age and Cancer Risk

Age distribution of AML

Second or New Cancer

Shared genetic risk (known and unknown)

Shared environmental exposure (known and unknown)

Field *cancerization*

Increasing age

Surveillance bias

New Cancers in People with a 1st Cancer

Age at initial diagnosis	Total		
	O	O/E	EAR
All ages	185,407	1.14*	21
00–17	351	6.13*	15
18–29	1,401	2.92*	22
30–39	4,909	2.37*	39
40–49	13,537	1.61*	39
50–59	34,159	1.27*	32
60–69	62,286	1.13*	23
70–79	52,321	1.02*	4
80–115	16,443	0.92*	-19

Cancer Risks

Lifetime risk males 43%

Lifetime risk females 39%

2nd Cancer 10-15%

Given this confounding and imprecision
we can only estimate whether leukaemia
developing after a prior cancer is *therapy-*
related.

Questions

What is *secondary or therapy-related* leukaemia?

Who has it?

Can we diagnose it accurately?

NOBODY KNOWS
ANYTHING.

WHAT A
RELIEF.

THANK
GOODNESS.

I THOUGHT IT
WAS JUST ME.

CiZarotti

It is uncertain everything is uncertain

Blaise Pascal
